

LumiLift & Microdermabrasion

LumiLift™

LumiLift™ combines Light Therapy, Micronized currents and HF Polarized currents to rejuvenate the skin. It treats aging at all three levels - epidermal, dermal and muscular. Each LumiLift™ session includes one full phase of Microdermabrasion.

LumiLift™ is able to correct or slow down skin aging by stimulating normal biological cell activity and by restoring youthful muscle tone. It increases collagen production in the skin, triggering repair mechanisms and stimulating fibroblast cells.

Improvements continue to occur for as long as three months after completing the basic treatment plan.
